

School-Within-School at Goding

School-Within-School is a public, teacher-directed, Reggio Emilia inspired elementary learning environment. In its second year of expansion, SWS relocated to its permanent home at the Anne M. Goding School in Capitol Hill.

In order to accommodate a growing population, the building formerly housing a 2nd-8th grade program was reconfigured to adapt to SWS' unique PS-2nd grade curriculum. Two new classroom suites were programmed and designed to support distinct student populations with special needs, while also integrating them into the larger school-wide program. A ground floor storage area was

repurposed to house a population of medically fragile disabled children.

The project was completed on a tight budget and timeframe, while also integrating planning for future program expansion and building renovation.

Project Data

Project Type: Renovation

Size: 59,000 sf

Construction cost: >\$355,000

Completed: August 2013

Client: District of Columbia Public Schools / DGS

General Contractor: Broughton Construction
